

MSCI China Indices

Reflecting the diversity of the Chinese investment universe and the variety of investment approaches to China

The MSCI China Indices consist of a range of country, composite and non-domestic indices for the Chinese market, intended for both international and domestic investors. The indices are calculated according to the MSCI Global Investable Market Indices (GIMI) Methodology.

Key Features and Benefits

Comprehensive Coverage — The MSCI China Indices cover all Chinese share classes through various index combinations, as depicted in the table below. Eighteen indices are calculated, including the MSCI Broad China Index, a representative sample for the entire Chinese investment universe, combining A, H, B, Red and P Chip share classes as well as Hong Kong-listed securities.

MSCI China A IMI — Targeting up to 99% of the investable market universe, the MSCI China A Investable Market Index (IMI) provides deep exposure to the China A share market. The index can be broken down into the MSCI China A Large, Mid and Small Cap segments. Sector indices are also available.

Rigorous Index Construction — As with all MSCI Equity Indices, the MSCI China Indices reflect a rigorous approach to index construction, incorporating broad sector diversification, free float adjustment, minimum float, liquidity and size guidelines, annual and quarterly index reviews.

Index Licensing — All the MSCI China Indices may be licensed for use by institutional investors around the world for portfolio management and benchmarking purposes. The indices may also be licensed to serve as the basis of structured products and other index-linked investment vehicles such as ETFs.

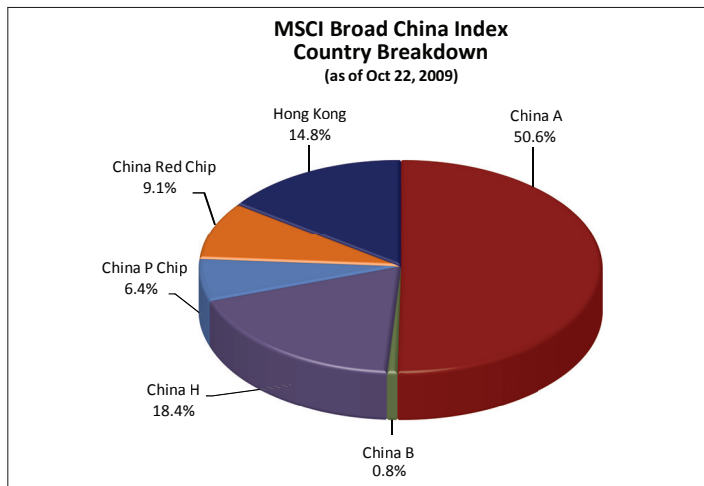

MSCI China Indices
